

# HV Supercapacitors

## Cylindrical cells

### Description

Eaton supercapacitors are high reliability, high power, ultra-high capacitance energy storage devices utilizing electric double layer capacitor (EDLC) construction combined with proprietary materials and processes. This combination of advanced technologies allows Eaton to offer a wide variety of capacitor solutions tailored to applications for backup power, pulse power and hybrid power systems. They can be applied as the sole energy storage or in combination with batteries to optimize cost, life time and run time. System requirements can range from a few microwatts to megawatts. All products feature low ESR for high power density with environmentally friendly materials for a green power solution. Eaton supercapacitors are maintenance-free with design lifetimes up to 20 years\* and operating temperatures down to -40 °C and up to +85 °C.

### Features

- Ultra low ESR for high power density
- UL recognized

### Applications

- Electric, Gas, Water smart meters
- Controllers
- RF radio power
- Solar capture
- Storage servers
- Pulse power
- Backup power

\*Supercapacitor lifetimes vary based on charge voltage and temperature. See Eaton's application guidelines or contact your local Eaton sales representative for more information on lifetime estimates

## Ratings

Capacitance	1.0 F to 100 F
Maximum working voltage	2.7 V
Surge voltage	3.0 V
Capacitance tolerance	-10% to +30%
Operating temperature range	-40 °C to +65 °C
Extended temperature range	-40 °C to +85 °C (with linear voltage derating to 2.3 V @ +85 °C)

\*\* Repeated short circuit current will permanently damage the leads and cause an open failure.

## Performance

Parameter	Capacitance change (% of initial value)	ESR (% of maximum initial value)
Life (1000 hours @ +65 °C @ 2.7 Vdc)	≤ 30%	≤ 200%
Storage (3 years, uncharged, <+35 °C)	≤ 5%	≤ 110%
Cycle Life <sup>9</sup> (500,000 cycles)	≤ 30%	≤ 200%

1. Capacitance and Equivalent Series Resistance (ESR) measured according to IEC62391-1 at +20 °C, with current in milliamps (mA) = 8°C\*V

2. Leakage current at +20 °C after 72 hour charge and hold

3. Energy (mWh) =  $\frac{1/2 * C * V^2 * 1000}{3600}$

4. Peak Power (W) =  $\frac{V^2}{4 * ESR}$

5. Pulse Current in Amps (A), 1 second discharge from rated voltage to half rated voltage =  $\frac{1/2 * C * V}{(1 + ESR * C)}$

6. Continuous current with a 15 °C temperature rise. Continuous current (A) =  $\sqrt{\frac{W}{ESR * Rth}}$

7. Thermal resistance (Rth) cell body temperature to ambient in open air in degrees C per Watt (°C/W)

8. Short circuit current is for safety information only. Do not use as operating current.

9. Cycling between rated voltage and half voltage, 3 seconds rest at +20 °C

## Safety and Certifications

Regulatory	UL810a, RoHS
Warnings	Do not overvoltage, do not reverse polarity
Shipping	UN3499, <0.3Wh, Non-hazardous goods

## Manual solder

+350 °C, 4-5 seconds. (by soldering iron), generally manual, hand soldering is not recommended.

## Cleaning/Washing

Avoid cleaning of circuit boards, however if the circuit board must be cleaned use static or ultrasonic immersion in a standard circuit board cleaning fluid for no more than 5 minutes and a maximum temperature of +60 °C. Afterwards thoroughly rinse and dry the circuit boards. In general, treat supercapacitors in the same manner you would an aluminum electrolytic capacitor.

Life Support Policy: Eaton does not authorize the use of any of its products for use in life support devices or systems without the express written approval of an officer of the Company. Life support systems are devices which support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
