### Marking

LR parts are marked in white on the upper blue surface, whilst LRF parts are marked in black on the upper white surface. Parts are marked with the value code, where this is up to four characters (e.g. "R025"). For five character value codes the value in milliohms is marked, with "m" indicating decimal position (e.g. "2m5" for value code R0025).

### Processing

For reflow of LRF parts, a solder paste thickness of not less than 100µm is recommended.

#### Note:

1. Although 2010 and 2512 sizes have passed temperature cycling and thermal shock, it is in general not recommended that ceramic chips this large be used on FR4 in a severe temperature cycle environment due to the possibility of solder joint fatigue. Full AEC-Q200 qualification applies only to ohmic values ≥R01.
