Temperature Derating

Typical Thermal Performance on FR4 Pad Heatsink

Characterisation carried out using 35μm PCB copper pad weights, with temperature of 90°C used as a maximum reference on the PCB. P_{90°C, 35μm} (W) is power when the measurement point reaches 90°C.

Pulse Performance

Single Pulse (P_{mean} << P_r) Condition

Pulse performance for durations ≥1s is dependent on mounting conditions. The short term overload power limit is 2 x power rating for 5s.

Typical High Frequency Performance

Typical high frequency characteristics for WSMHP35-220R. Self resonant frequency is 1GHz.
